TITLE : INFRARED SENSOR

ABSTRACT : PURPOSE: To efficiently receive infrared energy near $10\mu\text{m}$ to be detected by reducing erroneous operation due to external light including near infrared rays.

CONSTITUTION: A granular zinc selenide(ZnSe) having such characteristics that the refractive index in a wavelength region of about $10\mu\text{m}$ is equivalent to that of a high-density polyethylene 2 and the refractive index of a shorter wavelength region than $10\mu\text{m}$ is larger than the refractive index of the high-density polyethylene is mixed and diffused into the polyethylene 2 having characteristics high in transmittance and low in refractive index in the wavelength region of about $10\mu\text{m}$ to be used as a material for forming cover or lens of the infrared sensor.
